## Course Overview

The Trauma Care for Security Professionals (TCSP) course is designed to equip security personnel with the skills and confidence to provide life-saving care in operational environments.

Training begins with self-aid techniques, ensuring that participants can maintain their own health and safety before assisting others. Learners then progress to managing casualties in complex scenarios, including multiple injured personnel, and are introduced to triage principles in mass-casualty situations.

The course combines practical exercises and scenario-based learning, allowing participants to develop hands-on trauma management skills under realistic conditions.

## Who is the course for?

This course is suitable for:

- Security professionals responsible for the safety of others
- Close protection and executive protection teams
- Military and law enforcement personnel
- Corporate security teams operating in high-risk environments
- Anyone who may be required to provide emergency care in operational settings

No prior medical training is required; the course is designed to build competence from foundational self-aid through to advanced casualty management.

## Course Content

The TCSP course combines theoretical knowledge and practical skill development, covering:

- Self-Aid and Personal Safety
- Techniques to stabilise yourself and maintain operational readiness
- Primary Trauma Care Principles
- Initial assessment, airway management, bleeding control, and shock management
- Casualty Handling and Evacuation
- Safe movement of injured personnel and operational evacuation considerations
- Triage for Multiple Casualties
- Prioritisation, assessment, and resource management in mass-casualty scenarios
- Practical Trauma Scenarios
- Realistic exercises simulating multiple injuries and high-pressure situations
- Operational Integration
- Incorporating trauma care into security operations and team planning

**SORINTEQ**

## Aims and Objectives of the Course

By the end of the TCSP course, participants will be able to:

- Apply self-aid techniques to manage personal injuries in operational contexts
- Assess and prioritise casualties effectively using triage principles
- Provide emergency care for multiple casualties, including life-threatening trauma
- Understand the operational requirements for mass-casualty management
- Make informed decisions under pressure to protect lives and maintain operational capability
- Demonstrate confidence and competence in using trauma equipment and techniques
- Integrate trauma care into overall security operations and risk management

## Why Choose Sorinteq

Sorinteq delivers university-accredited, practitioner-led training trusted by Government and commercial organisations. Our TCSP Course equips participants with specialist knowledge, practical experience, and operational confidence, ensuring they can effectively protect clients and organisations from ransomware threats.

Students undertaking courses provided by Sorinteq may earn credits towards formal academic qualifications such as Post Graduate Certificate, Diploma or MSc at the university of Buckingham.
